

# EB Security – Mobile Application Guide

This guide is to assist users to navigate through the different application screens, interfaces and features for the EntityBox Security Mobile Solution (EB Security)

Should you require more assistance, kindly send us an email: <u>support@entitybox.co.za</u>

Testing this product will require a trial setup from the EntityBox Security Website.

This product **cannot** communicate to EntityBox Security Website, nor the On-Premise environment without proper configuration.

Required Steps to complete before making use of this guide:

- 1. EntityBox Website Registration
- 2. EntityBox Security Solution Installation and configuration

This guide will assume the above configuration has been completed.

## Dashboard ......5 Unlock Account Biometric & Login Settings......12 Internet Requirement......13

## **Get Started**

Download the Application from your preferred store.

- Search in the store for "EntityBox Security"
- Click on the store links on the right
- Scan the QR Code with your device and then select the store

Once the application is installed, you can perform the registration tasks.

## **Application First Use**

Navigate through the carousel slide pages on Application First Use by clicking the "Next" button.

→ Allow Notifications when prompted to receive reminders on 7 days and 1 day before password expiry.

### Corporate Email

- In order to register, you must enter your corporate email address, *Free email address accounts cannot register.*
- Once entered click on the "Register" button.
- You will be prompted to check your email address for the Unique QR Coded email.

Once you click the register button, there might be a slight delay as the application would try to reregister the account inside your organisation, and also check if it already exists.

If you receive an error at this stage, contact your organisation administrators or our support team to check if the system is correctly configured.

## QR Code Scanning

- Upon receipt of the QR Coded email, open the application.
- Click on the "Scan QR Code" button
- Provide Access to make use of the camera in order to scan the QR code in the email

Security Solution In equ your cameral Scan the QR Code received in email to proceed.	Security Solution QR Scanning.	Welcome to EntityBox Security Pin Registration Enter a new personalized 4 digit pin number to access this application. Pror 4 digit pin. Negree Pin

Once the QR Code scanning is done, you will be presented with the Pin Selection Page. Enter a unique 4 digit pin number to access the application in future.

Do not forget this pin number as you will not be able to access the application without it!

If you receive an error on the QR Code, it will indicate that the QR Code does not match your account or you are trying to scan an old QR Code. Tap the blue link to re-register and receive an updated QR Code email by starting the registration process again.

#### Note that the pin number cannot be changed after inserted to the application.

*If the pin number must be changed, the account must be removed from the application and/or the re-registration process must be performed again.* 

# Dashboard

18:5	54	•••1 4G 🚺
≡		Dashboard
	_(	$\overline{e}$
	User:	Test User (EB)
ß	Email:	testuser@entitybox.co.za
6	Account Statu	s: Locked
	Token Valid:	2023-02-03 19:04:10
0	Next Reset:	2023-02-07 05:02:12
6	Last Refresh:	2023-02-03 18:54:27
		Refresh Account Unlock Account Reset Account
	_	

The Main Dashboard will be displayed as the primary page after each login.

Menu	Description
User:	Display Name from On-Premise
Email:	Registered Email address
Account Status:	Enabled:
	Account Reset might be available.
	Disabled:
	No action can take place.
	Locked:
	Unlock or Reset might be available.
Token Valid:	Tokens auto expire after 20 minutes.
Next Reset:	Calculated result from organisational
	policy for the next reset to occur.
Last Refresh:	Last refresh of information on the
	dashboard.
Button	Description
Refresh	Refresh the dashboard, token
Account:	renewal and account information
	from On-Premise.
Unlock	Available only if the Account Status is
Account:	set to "Locked"
Reset	Available only if allowed from the
Account:	organisational policy after the last
	reset.

On Refresh of the dashboard, a new Token will be generated and will only allow for regeneration after 15 minutes (5 minutes before expiry). The Token is valid for 20 minutes at a time with a 5-minute grace refresh period.

Without a valid token, information will not be synchronized from your On-Premise environment.

If the account refreshed and both Unlock and Reset buttons remains "greyed out" it could mean that the policy is not configured correctly, or the timing of your refresh is within the disallowed period to perform an account reset.

### **Unlock Account**

Unlocking of the account will only be available if the following conditions are met:

- Account Token is valid and account information is refreshed.
- Account Status is shown as "Locked"

The Unlock button will otherwise appear "greyed out" or disabled.

- Privacy notice will warn users that they will be working with sensitive data.
- The password validation process will start as soon as a user starts typing in a new proposed password for use.
- Visual cues will be shown to the user as set by the organisation policies

#### **Reset Validation**

Multiple validations are checked before the user can proceed with resetting their password.

Each policy **must match** (green check-mark) before the "Validate Password" button will enable.

Upon "Validate Password" tap, the application will perform the following checks:

- Check the Organisation Explicit Block list for a partial or exact password match.
- Check if the password was breached on the internet previously and match the breach count against the Organisation policy setting.

*If this validation fails, the password is automatically added to the Explicit Block list.* 

• Check if the password is in the On-Premise solution password history list for the user and match against the Organisational Password History Allowed Count

For security purposes, the validation checks mentioned before will be re-applied before actually committing the password to Active Directory.

Requesting the password to be re-typed by the end user also ensures they paid attention and remembers their password as this new password will be used from this point forward within the organisation.

## Biometric & Login Settings

Biometrics (Fingerprint or FaceID) can be enabled.

Allow the prompt from the operating system when the "Use Biometric Login" is enabled.

Immediate authentication will be tested to ensure the setting can Save.

Click the "Access Application" button on the Login screen **without any pin entered** to prompt biometrics.

Once the biometric setting is enabled, the user can update the "Auto Login on Application Start" setting.

If this setting is enabled, the application will try to authenticate instantly once the application Login screen appears.

## **Support & Errors**

#### **Internet Requirement**

Internet is a requirement for this application to function. Encrypted traffic is sent over a secure channel to EntityBox Servers and On-Premise. Without internet the application will indicate a connection error.

#### **Pin Reset**

Pin number cannot be reset in the application for security enhancement. The full registration must be performed if a pin number is forgotten.

If Biometrics still works, the user can login on the application and select the "Delete Account" button under Settings Page.

If no access to the application is possible, the user can click the blue link on the Login Page called "click here to re-register your account", followed by the second blue link "click here to re-register your account". The second blue link will serve as confirmation that the account must be removed.

#### Errors

Errors are placed as small notifications on the Dashboard page in order not to intrude on the application and functionality. If the users receive a lot of errors, this could be due to:

- Device communication over the internet
- Communication to On-Premise Servers
- Incorrect data received on decoding encryptions (Tampering)

It is recommended that the administrators of the organisation frequently check for problematic devices and errors in the Web console, or when a user report an issue.

#### Disclaimer

Although EntityBox try our best to deliver a robust and secure application, we try to keep mobile data consumption to an absolute minimum. EntityBox cannot assume any liability for damages, user negligence or any event that occurs on our platform. We recommend performing a trial period with selected technical users to ensure proper configuration before distribution to all users are done.

EntityBox complies with all legislative requirements in protection of personal information and no sensitive information is stored on our Servers, merely passed through our services between device and On-Premise, processed only to ensure delivery of our services as advertised. No information is forwarded to Third-parties without the customers' explicit consent in writing.

EntityBox is a registered trademark and should not be used without our consent.

Send your comments, requests and feature suggestions to our support: <a href="mailto:support@entitybox.co.za">support@entitybox.co.za</a> .
